

J2200 Series Benchtop Dispensing Robot

Activators Anaerobics Cyanoacrylates Silicones Solvents Primers UV-cure

The J2200 series robots are designed to apply rapid dots, beads, arcs, circle and potting deposits to products placed on the base plate. The overhead gantry indexes into position to make the required deposit without mess, waste or guesswork.

The robots are programmed via the LCD electronic teach pendant, or using optional windows based software on a PC. The robust robots will dispense most assembly fluids including epoxies, PU's, glues, CA's, silicones, greases, adhesives, inks, gels, primers and activators.

Each robot is supplied with a teach pendant, CE start/ stop box, digital controller or solenoid valve, syringe barrel mount bracket, component kit. Easy to mount valves or sealant cartridge retainers.

Even complex program patterns can be developed quickly using the simple point to point teach pendant. Dispense adhesive direct from syringes or optional metering valves and pressure pots. With fast indexing speeds, high accuracy and simple programming; robots are an ideal solution for most dispensing applications in a 200mm x 200mm work area. 3 or 4 axis versions available. Recommended optional light guard safety cages also available.
